

# Reduce accident costs and create a safety-conscious driving culture

**Unsafe driving leads to violations for 1 in 4 fleet vehicles.** It can also lead to accidents, which have enormous impact on your business. Implementing a fleet safety program is a crucial first step in preventing accidents and promoting a safety-conscious driving culture.

Wheels Safety program covers every aspect of safety, including establishing a safety policy, identifying risk, intervention and reinforcement.

Because different fleets have different safety needs, our program is structured so that it can be custom-designed to your specifications. We help you select what you need from our program's components, such as:

- Motor Vehicle Record & Points program
- Safety Training
- Driver Performance Assessment

## MVR Monitoring

Wheels MVR Monitoring program enables you to put your safety focus where it is most needed and pinpoint

trends that could expose your business to risk. All without the wait of traditional programs. This system automatically identifies and flags potential problem drivers, lowers the number and severity of accidents if corrective action is taken, and saves you money. Our program provides you with an accurate, up-to-date history of driving performance for each driver in your fleet, as well as other individuals who might drive a company vehicle. We also offer an MVR points system that provides a simple, effective method for establishing whether drivers are operating within the parameters of your safety policy.

## Safety training

Increased safety awareness reduces accident frequency and severity. The Wheels Safety Training services help protect your drivers while lowering your accident rate.

Our complete program offers both online and behind-the-wheel training to reinforce good driving practices to your employees. Drivers can be assigned to a standard schedule of training courses (updated annually per your needs),

## WHEELS SAFETY PROGRAM DOES IT ALL

- Policy benchmarking
- Access to research and expertise
- Educational presentations and statistics tailored to your company
- MVRs and risk profiling
- Automated training assignments
- Communication tools including a custom web portal, surveys, driver fair exhibits

on an ad-hoc basis, or based on predetermined criteria such as upon hiring or after at-fault collisions.

### **Driver performance assessment**

Driver Performance goes beyond driver records and collision data to provide you with the most comprehensive, integrated and flexible way to evaluate and take action on your drivers' performance.

The service combines multiple points of driver data—collision history and MVR data, as well as events like training data, manager observations, telematics information and more—to calculate one overall driver score and help you analyze risk. The events included are customizable, offering the simplest solution for measuring driver behavior per your company's specific parameters.

Driver Performance integrates all of your chosen driver information through our online safety command center, eliminating the need for you to spend time monitoring programs across multiple vendors.

Wheels can support you in achieving your goals of reducing accidents and promoting the wellbeing of your employees and their families. Whether through setting the right policy, screening for risky behavior, minimizing distractions or addressing any other concerns, Wheels can help you manage your safety program more effectively.
